

Hospital School Program

Our goal is to help patients maintain academic skills, while also providing structure and normalization during hospital stays. Our hospital school program offers a variety of educational services tailored to each patient's needs.

To arrange for your child to participate in the hospital school program, please talk with your social worker, child life specialist or nursing staff.

Services we offer.

Communication with School

With parental/guardian permission, the hospital teacher may contact your child's regular classroom teacher to coordinate assignments while he/she is hospitalized. Assignments can be scanned/emailed directly to the hospital.

Individualized Instruction

The hospital teacher can provide individualized instruction aligned to the school district's curriculum in a 1:1 or small group setting. Instruction can take place right at your child's bedside or in our hospital classroom.

Return-to-School Planning

The hospital teacher will collaborate with the school district prior to discharge to meet school re-entry needs, which may include an individualized educational plan, 504 plan, or hospital/homebound services.
