Please include:
- name, address, phone number
- total number of guests
- dates of attendance

Contact Vanessa Montanez at (302) 651-6521 if you require additional information.

ABOUT THE SWANK FOUNDATION
In 2011, a gift of $1 million from the Swank Foundation established the Swank Center in Neuro-Orthopedics at Nemours/Alfred I. duPont Hospital for Children. This gift made possible the creation of a cerebral palsy database, new equipment to fabricate orthotics for children with disabilities, professional and family education, psychological support for children with neuro-orthopedic conditions and their families, and improvements to the hospital’s Gait and Motion Analysis Laboratory. “Our partnership with the Swank Foundation will allow us to create an extraordinarily valuable tool that will help researchers understand physical impairments in children with cerebral palsy and other neuro-orthopedic conditions,” says Robert Akins, PhD, Co-Director of the Center for Pediatric Clinical Research and Development. “Advanced therapies, improved diagnostics, and early interventions that improve the quality of life for patients will all become possibilities, thanks to their generous support.”
